Prospect Fair & Technofest Offers Unique Opportunity for Investors *Annual event set to be largest ever with 130 exhibitors*

(DENVER) – Industry representatives today touted the upcoming 9th Annual Denver Prospect Fair & Technofest as an opportunity for investors to view a large sample of the Rocky Mountain Area prospects and visit with the people who support the oil and gas industry in the Intermountain West.

The Prospect Fair & Technofest will be held Monday, November 5, 2007 from 9:00am to 5:00pm at the Colorado Convention Center. Hosted by the Rocky Mountain Association of Geologists (RMAG), Denver Association of Professional Landmen (DAPL), Denver Geological Survey (DGS) and Independent Petroleum Association of Mountain States (IPAMS), the booth-type format allows participants to browse alternating rows of prospect exhibitors and technical exhibitors, and offers members of the Rocky Mountain oil and gas community an opportunity to view the best prospects the region has to offer with a glimpse at the latest products and services in the industry.

Co-chairman Stephen Perlman emphasized the unique opportunity for investors to “catch up with nearly every aspect of the busy oil and gas industry.”

“Our industry’s future is re-created and sustained by the individuals, companies, and organizations that offer, develop, and support oil & gas prospects,” Perlman said. “Many of these industry creators will be here at this event—we have a full house this year with 46 Prospect Fair and 84 Technofest Exhibitors, the largest ever registered.

“There is no better place to view a large sample of the Rocky Mountain Area prospects and visit with the people who support the oil and gas industry,” said Perlman.

Other host organizations for the event include: The Independent Petroleum Association of Mountain States (IPAMS), the Denver Association of Petroleum Landmen (DAPL) and the Denver Geophysical Society (DGS).
